

TECHNOLOGY

Elite has the expertise to integrate your project with the latest in modern critical infrastructure technology solutions for local, regional, and wide area applications. By leveraging technology disciplines across our Security and Transportation areas of business focus, our technology team can provide a single stand alone product, or a suite of hardware and software systems, fully integrated to future proof your application. Systems are designed to communicate securely over the latest back bone technology including traditional networks, fiber optics, and wireless communication systems. Retrofit of existing systems can offer a lower cost approach to system upgrade and extend the life of the technology.

We keep our team well-trained in order to use the latest and most effective technology. Our 24x7x365 Prevention Plus maintenance team can provide local or remote diagnostics over secure network connections minimizing downtime and maintaining system operability.

- Fiber Optic Communications Backbone
- High Speed Wide Area Networks
- Wireless Communication Solutions
- UPS/Generator Systems
- Traffic and Signal Technology
- Solar Powered Systems
- Touchscreen Human Machine Interface
- CCTV Surveillance
- Supervisory Control and Data Acquisition (SCADA)

ELITE

A Better Solution. Every Day.
