

TRANSPORTATION

Elite brings many talents in the area of transportation technology, safety and maintenance support services. We thrive on high-demand projects and installations where timing and accessibility are critical. Our team has successful experience delivering technology solutions in the most demanding environments including bridges, tunnels, waterway, high-density traffic areas, congested urban locations, and other critical infrastructure transportation applications. Using fiber optics, traffic surveillance cameras, dynamic message signs, emergency stop gates and others we blend smart technology with effective highway construction operations.

By teaming up with Heartland Concrete's [Rapid Return to Service](#) solution your roadway repairs are back up in hours. Heartland Concrete, with a volumetric delivery system, allows installation of quick

drying solutions getting your operation back up and running minimizing traffic delays and increasing safety.

Elite Transportation projects integrate **safety, mobility, and constructability** at the highest performance level. Safety: protecting the traveling public and workers. Mobility: maintaining safe traffic flow and minimizing congestion. Constructability: completing projects on time, within budget, meeting quality standards with zero safety incidents.

Elite Traffic Management and Work Area Safety Plans are carefully built for active highway work zones with an emphasis on strategic planning and safety countermeasures.

Our field management strategies include training, planning, exercising, partnerships with uniformed law enforcement officers, conspicuous worker visibility, and real time communication with all stakeholders. All safety equipment is owned and operated by fully trained and certified Elite staff.

ELITE

A Better Solution. Every Day.
